

Business Requirement Document (BRD)

Order Management System

Document Owner	Rishabh Sahu
Document Version	2.0
Date	3rd August 2026

VERSION	REVIEWED BY	DATE OF UPDATE	DESCRIPTION OF CHANGE	CHANGE REQUESTED BY	AUTHOR
1		03-08-26	Initial draft	-	Rishabh Sahu
1.1		05-08-26	Updated OMS requirements based on implemented workflow changes, amendment workflow, cancellation, Close Billing, dashboard, billing report and approval enhancements	Shantanu Rooj	Rishabh Sahu
2.0		17-08-26	Added dual order-creation paths, client-master sync during order creation, automatic SPOC population, new Amendment Pending stage, BU filter in Billing/Manager reports, single-order cancellation restriction in Manage Orders, and live stage counts on Manage Orders tabs	Sachin Yadav	Rishabh Sahu

Parent Application: Empower

Document Type: Business Requirement Document

Prepared For: Order Management System

Primary Users: BD, Tech, Finance, Admin

Products: LMS, Quirio initially; additional products to be added in future

1. Purpose

The **Order Management System (OMS)** is a new module within the company's existing internal B2B business management platform, **Empower**.

The OMS will provide a centralized platform for managing the complete lifecycle of B2B orders, from order creation through approval, activation, amendment, and eventual closure.

The primary purpose of OMS is to establish a structured and controlled order lifecycle between the **Business Development (BD), Technical, and Finance teams**, while providing management with visibility into order status, approval bottlenecks, revenue, and revenue projections.

The OMS will also provide role-based access, with the **Admin team responsible for controlling which users have access to which OMS capabilities**.

The system will initially support the company's **LMS and Quirio products**, with the ability to extend the system to additional products in the future.

2. Business Context

OMS will be added as a module within the existing **Empower** platform rather than operating as a separate application.

The existing platform already contains core business information such as client and user information. OMS will use these existing records instead of creating duplicate masters wherever applicable.

The OMS will become the central system for managing the order lifecycle after the BD team creates an order.

The lifecycle will be governed by two separate approval functions:

- **Technical Approval**
- **Financial Approval**

An order will only become Active after it has successfully passed both approval stages.

When an Active order needs to be cancelled, the cancellation process will be initiated through OMS. Cancellation is treated separately from the approval workflow for new orders and amendments.

OMS will also provide a dedicated Close Billing capability for managing billing opening and closing activities associated with orders.

The reference OMS prototype establishes this same principle of a governed lifecycle with sequential Technical and Financial approvals and provides dashboard and revenue visibility around that process.

3. Objectives

The key objectives of the OMS are to:

1. Centralize B2B order management within Empower.
 2. Provide BD with a structured process to create, amend and close orders.
 3. Ensure all new orders go through the required Technical and Financial approval process.
 4. Ensure order cancellation is properly initiated, tracked and reflected in the order lifecycle.
 5. Maintain complete order history when an order is amended.
 6. Prevent amendments from overwriting the original order.
 7. Provide clear visibility of pending approvals and orders requiring attention.
 8. Provide management with an overview of order volumes and revenue.
 9. Provide revenue projection based on contracted order value.
 10. Provide reports for approval analysis, billing/revenue projection and account-manager performance.
 11. Provide Admin with control over user access and permissions.
 12. Establish a scalable structure that can support additional products beyond LMS and Quirio.
 13. Provide a dedicated Close Billing process for managing billing opening and closing activities.
 14. Provide users with centralized visibility into pending approvals, cancellation actions and billing actions.
-

4. Scope

4.1 In Scope

The OMS will cover three primary business areas:

A. Order Lifecycle Management

- Order creation
- Order viewing
- Order search and filtering

- Order amendment
- Order cancellation
- Order status tracking
- Order versioning
- Order history
- Order preview

B. Approval Management

- Technical approval
- Financial approval
- Amendment approval
- Approval/rejection handling
- Approval status tracking
- Approval history
- Pending approval management

C. Monitoring, Dashboard, Billing and Reporting

- Dashboard
 - Order status KPIs
 - Dashboard filters
 - Notifications
 - Approval bottleneck monitoring
 - Revenue reporting
 - Revenue projection
 - Billing opening and closing
 - Opened Revenue reporting
 - Account Manager revenue analysis
 - Approval reports
 - Billing/revenue projection reports
 - Manager reports
-

5. User Roles and Responsibilities

OMS will use role-based access.

The primary roles are:

5.1 BD Team

Business Required Document(BRD)- Order Management System

The BD team is responsible for managing the commercial order lifecycle.

BD users will be responsible for:

- Creating orders
- Viewing orders
- Amending orders
- Initiating cancellation of orders
- Monitoring order status
- Responding to rejected orders
- Making required changes to rejected orders
- Resubmitting orders for approval
- Viewing relevant dashboard and reporting information

The **Client Manager** within BD will be responsible for making changes to an order when it is rejected and moving the order back into the required approval process after the necessary changes are made.

5.2 Technical Team

The Technical team is responsible for Technical approval.

Technical users will:

- Review orders requiring Technical approval
- Approve orders
- Reject orders
- Review amended orders
- Review and approve/reject Technical approval requests
- Review amended orders requiring Technical approval
- Review relevant order information and history
- View order information and relevant history

The Technical team is responsible for determining the technical suitability of an order; the detailed technical evaluation criteria are outside the scope of this product.

5.3 Finance Team

The Finance team is responsible for Financial approval.

Finance users will:

- Review orders requiring Financial approval
- Approve orders
- Reject orders
- Review amended orders
- Provide Financial approval for order closure
- Reject closure where applicable
- View relevant financial/order information
- Review revenue and billing-related reports

The detailed financial validation criteria are outside the scope of the OMS product requirements.

5.4 Admin

Admin will have the highest level of system access.

In addition to having access to the OMS functionality, Admin will be responsible for **access and permission management**.

Admin will be able to:

- Manage OMS user access
- Determine which users have access to OMS
- Determine which functionality a user can access
- Manage role-based permissions
- Manage access for BD, Tech and Finance users
- Monitor system activity as required

Admin access will therefore control **who can access what within OMS**.

6. Role-Based Access

The system shall enforce role-based access based on the user's assigned permissions.

The high-level responsibility split is:

Business Required Document(BRD)- Order Management System

Function	BD	Tech	Finance	Admin
View Dashboard	✓	✓	✓	✓
View Orders	✓	✓	✓	✓
Create Order	✓	—	—	✓
Amend Order	✓	—	—	✓
Initiate Cancellation	✓	—	—	✓
Review Technical Approval	—	✓	—	✓
Review Financial Approval	—	—	✓	✓
View Approvals	✓	✓	✓	✓
Open/Close Billing	As per assigned permission	As per assigned permission	As per assigned permission	✓
Reports	✓	✓	✓	✓
Access Management	—	—	—	✓

The detailed permission matrix will The detailed permission matrix will be maintained by Admin.

7. OMS Navigation

The OMS module will primarily consist of:

1. Dashboard
2. Manage Orders
3. Approvals
4. Open/Close Billing
5. Reports

The Manage Orders section will provide order lifecycle management functionality including order creation, viewing, amendment and cancellation.

The Approvals section will provide a centralized view of approval requests requiring user action.

The Open/Close Billing section will provide functionality for managing billing opening and closing activities.

The exact navigation structure may be refined during UI/UX design without changing the business requirements defined in this document.

8. Order Lifecycle

The OMS order lifecycle will follow:

New Order:

Order Creation

↓

Pending (Technical Approval → Financial Approval)

↓

To Open (awaiting Finance to open billing)

↓

Active

Business Required Document(BRD)- Order Management System

↓

Amend / Cancel

For an amendment:

Active Order

↓

Amendment Initiated

↓

Successor Order Created (Amendment Pending)

↓

To Amend (awaiting Finance to complete the amendment in Open/Close Billing)

↓

Successor Active

+

Predecessor Cancelled

For a cancellation(from Active or Agreement Over):

Active/Agreement Over Order

↓

Cancellation Initiated

↓

Pending (Technical Closure Approval → Financial Closure Approval)

↓

To Close (awaiting Finance to close billing)

↓

Closed — *reopenable back to "To Close" if closed by mistake.*

The amendment approval workflow and cancellation process are separate from the Close Billing process.

Close Billing is managed through the dedicated Open/Close Billing module.

9. Order Statutes

The OMS will provide visibility of orders across the following primary stages:

All Orders

Displays all orders accessible to the logged-in user.

Pending

Displays orders that are awaiting completion of a required workflow or approval action.

Amendment Pending

Displays successor orders created through an order amendment that are awaiting completion of Technical and/or Financial approval — kept distinct from "Pending" so newly created orders and in-flight amendments can be told apart at a glance.

Active

Displays orders that have completed Technical and Financial approval and had their billing opened by Finance.

Agreement Over

Displays Active orders whose defined agreement period has elapsed.

Cancelled

Displays orders for which the cancellation process has been completed.

These stages will be visible through the Dashboard and Manage Orders areas.

10. Order Creation

The BD team will be able to create a new order through OMS.

The order creation process will capture the information required to establish the commercial relationship and billing terms for the order.

Orders may be created through OMS via one of two paths:

1. Direct Order Creation — the BD user creates a new order directly within OMS.
2. Opportunity/Pipeline Conversion — an opportunity/pipeline record tracked and progressed within Empower is converted into an order once it reaches the appropriate stage.

Both paths lead into the same six-step order creation flow described below.

The order creation flow will consist of:

1. Client
2. Contact
3. Order
4. Payment
5. Documents
6. Remarks

The reference prototype uses the same six-step order creation structure:

Once a client and product have been selected, the complete order form is shown, including the client's full billing details (Client Name, Billing Address, Delivery Address, State, City, GST Number, etc.). All of these fields, including Client Name, remain editable at this point. Because OMS reuses the existing Empower client master rather than keeping a separate copy, **any changes made here update that shared client record directly** — the change is not scoped to just the order being created.

11. Client Information

The order will be associated with an existing client from the Empower platform.

Client information will include, as applicable:

- Client name
- Client type
- Billing address
- Delivery address
- State
- City
- GST number
- SPOCs
- Client Manager

The OMS will use existing client information available within Empower rather than creating a separate client master wherever the existing data is sufficient.

Because these fields are edited in place against the shared Empower client master, a correction made while creating one order (e.g., an updated billing address) will also apply to that client's other existing and future orders.

The reference model defines Corporate and University as client types and associates the client with a Client Manager and one or more SPOCs.

11.1 SPOC Auto-Population:

The Contact step of order creation shall automatically add the user creating the order as one of the order's SPOCs, alongside any SPOCs already recorded for the client. The BD user may add or remove additional SPOCs as needed.

12. Product and Order Details

The OMS will initially support:

- **LMS**
- **Quirio**

The product structure will be designed so that additional products can be introduced in the future without redesigning the complete OMS order lifecycle.

Product-specific information will be captured based on the selected product.

13. LMS Order

For LMS, the order will capture:

- Number of Users
- Fee Per User

The order amount will be calculated based on:

Number of Users × Fee Per User

14. Quirio Order

For Quirio, the order will capture applicable information including:

- Billing basis
- Number of Users
- Number of Assessments
- Unit Price
- Automated Proctoring
- Proctoring by Team
- Proctoring Videos
- Grading by Team
- Maths Editor
- Free Assessments
- Question Type
- Device Type

The exact product-specific fields are based on the existing OMS reference and can be extended when additional products are introduced.

15. Payment and Billing Information

The order will capture the commercial and billing terms associated with the order.

The information will include:

- First Billing Month
- Billing Cycle
- Agreement Period
- Advance
- TDS
- Credit Period
- Documents
- Remarks

The supported billing cycles will include:

- Monthly
- Bi-monthly
- Quarterly
- Half-yearly
- Yearly
- One-time

The Agreement Period may be defined in months. Where no fixed agreement period exists, the order may be treated as open-ended.

16. Order Numbering

OMS will generate and maintain unique order numbers.

The numbering structure will distinguish:

- New orders
- Repeat orders
- Amended orders

An amended order will use a versioned order number linked to its original order.

For example:

Order 100 → Order 100/1

The exact numbering convention may be finalized during implementation while retaining the requirement that amended orders remain clearly linked to their predecessor.

17. Duplicate Order Validation

For University clients, OMS will check whether an existing order already exists for the selected product.

If an existing order is found, the system will guide the BD user toward amending the existing order rather than creating an unintended duplicate order.

This duplicate-order validation will apply to **University clients** and will not apply to **Corporate clients**, consistent with the existing OMS business logic.

18. New Order Approval Workflow

Once the BD user completes an order, the order will enter the approval workflow.

The workflow will be:

BD Creates Order

Pending

Technical Approval

Financial Approval

Order Active

Technical approval must be completed before Financial approval becomes actionable.

The reference prototype explicitly enforces this sequential approval model.

19. Approval Rejection and Resubmission

If an order is rejected at any approval stage:

1. The order will remain at the stage at which it was rejected.
2. The BD / Client Manager will be notified of the rejection.
3. The order will not automatically move backward or forward in the workflow.
4. The rejection reason/remarks will be available to the BD user.
5. The Client Manager will make the necessary changes to the order.
6. Once the required changes are made, the Client Manager will resubmit/retrigger the relevant approval stage.
7. The order will then proceed through the approval workflow again from the relevant stage.

For example:

BD Creates Order → Tech Rejects → Order remains at Tech stage → BD notified → BD makes changes → Tech approval triggered again → Tech approves → Finance approval

The same principle applies if Finance rejects the order.

20. Approval Actions

Each approval stage will support:

- Approve

- Reject

The approval action will capture relevant approval information including:

- Approver
- Date/time
- Approval status
- Remarks/rejection reason

The system will retain approval history for the order.

Approval Review

The approval review interface shall provide a stepper-based view of the order information, aligned with the order creation stages, allowing approvers to review the relevant order information before taking an approval action.

Approval items requiring action by the logged-in user shall be visually highlighted as requiring review.

The reference model defines each approval stage with status, decision date, processed-by information and remarks.

21. Order Activation

An order will become **Active** only when:

1. Technical approval has been completed successfully.
2. Financial approval has been completed successfully.

An order cannot become Active after only one of the two approvals.

22. Order Amendment

BD users will be able to amend an Active order.

An amendment will **not overwrite the original order**.

Instead, OMS will create a new version of the order and maintain a relationship between:

- The original order — **Predecessor**
- The amended order — **Successor**

For example:

Order 100 → Order 100/1

The amendment workflow shall treat the successor approval and predecessor cancellation as part of a single amendment process.

The predecessor shall not undergo a separate Technical and Financial closure approval workflow as part of the amendment.

This approach ensures that the original order remains available for historical reference and audit purposes.

23. Amendable Fields

The following fields will be amendable:

- Product
- Number of Users / applicable quantity
- Rate
- Payment Terms
- First Billing Month
- Agreement Period
- Advance Payment

These are the same amendment fields defined in the existing OMS reference.

Other order information will remain unchanged unless separately defined as amendable in a future requirement.

24. Amendment Workflow

When BD initiates an amendment to an Active order:

Step 1 — Create Amendment

BD modifies the permitted amendable fields.

The system shall prevent submission of an amendment when none of the amendable fields have been changed.

Step 2 — Create Successor

OMS creates a new version of the order.

The successor:

- Receives a versioned order number.
- Starts in an inactive/pending state.
- Retains a link to the original order.

Step 3 — Amendment Approval

The amended successor goes through the required approval workflow:

Technical Approval → Financial Approval

Technical approval must be completed before Financial approval becomes actionable.

Step 4 — Amendment Completion

Once the successor successfully completes Technical and Financial approval:

- The successor becomes Active.
- The predecessor is cancelled as part of the same amendment process.

The predecessor does not undergo a separate Technical Closure Approval or Financial Closure Approval as part of the amendment workflow.

The amendment therefore follows a single approval process in which successful approval of the successor results in activation of the successor and cancellation of the predecessor.

25. Order Cancellation

BD will initiate cancellation for an Active order.

The cancellation process will be:

BD Initiates Cancellation

↓

Cancellation Processing

↓

Cancelled

Cancellation is separate from the approval workflow for new orders and amendments.

Cancellation of a predecessor resulting from an approved amendment is completed as part of the amendment approval process.

26. Cancellation Information

At the time of cancellation initiation, the following information will be required:

- Effect From Date
- Outstanding Balance
- Cancellation Reason
- Comments

Cancellation reasons will be maintained through a configurable master list and may be maintained on a product-wise basis.

27. Cancellation Approval

Cancellation shall be recorded against the applicable order once the cancellation process has been completed.

For an amendment, the predecessor cancellation shall be triggered as part of the successful completion of the successor's Technical and Financial approval workflow.

There shall be no separate Technical Closure Approval or Financial Closure Approval for the predecessor as part of the amendment workflow.

28. Close Billing

The Open/Close Billing module will provide a dedicated interface for managing billing opening and closing activities associated with orders.

28.1 Billing Status Categories

The Open/Close Billing module will provide the following categories:

- To Open
- To Close
- To Amend
- Closed

28.2 Billing Checklist

The system shall provide a checklist-based view allowing users to review the applicable billing items before confirming a billing action.

28.3 Batch Billing Confirmation

Authorized users shall be able to select applicable billing items through the checklist and perform the relevant billing action through batch confirmation.

28.4 Billing Dates

The Close Billing view shall provide relevant billing dates, including:

- Approved On
- Cancelled On

The Close Billing process is separate from the order cancellation process.

29. Dashboard

The OMS Dashboard will provide a consolidated overview of order activity, approval status, notifications and revenue.

The Dashboard will contain the following sections.

Dashboard Filters

The Dashboard shall provide filters that allow users to refine the displayed data.

The available filters shall include:

Business Required Document(BRD)- Order Management System

- Date
- Business Unit
- Product

The Date filter shall provide the following preset options:

- 1 Month
- 3 Months
- 6 Months
- Last Year
- Custom

The Custom option shall allow users to select a specific date range.

The Business Unit filter shall provide the configured Business Unit options.

29.1 Order Status KPIs

The Dashboard will display:

- All Orders
- Pending
- Active
- Agreement Over
- Cancelled

These KPIs will provide an immediate view of the order pipeline and allow users to navigate to the relevant order list.

29.2 LMS and Quirio Revenue

The Dashboard will provide revenue information for:

LMS and Quirio Revenue — FY 2026–2027

The view will provide visibility into revenue generated/projected for the relevant fiscal year.

The product structure should allow additional products to be added in future.

29.3 Notifications

The Dashboard will display relevant notifications to users.

Notifications may include:

- New order awaiting Technical approval
- Order awaiting Financial approval
- Order rejected by Tech
- Order rejected by Finance
- Amendment requiring approval
- Cancellation initiated
- Cancellation completed
- Billing action requiring attention
- Other workflow events requiring user attention

Notifications will be role-sensitive so that users receive notifications relevant to their responsibilities.

29.4 Orders Stuck by Approval Stage

The Dashboard will display orders that are currently waiting at an approval stage.

The breakdown will include:

- Technical Approval
- Financial Approval

This will provide management and relevant teams with visibility into approval bottlenecks.

29.5 Needs Immediate Attention

The Dashboard will highlight orders that require immediate attention.

Priority should be given to:

- Aging closure orders
- Amendment-related orders
- Orders stuck in approval
- Agreement-over orders requiring action

This will allow BD, Tech, Finance and management to identify potential operational delays.

29.6 Revenue by Account Manager

The Dashboard will display:

Revenue by Account Manager

This will allow management to compare revenue associated with different BD/Account Managers.

29.7 Revenue Projection by Account Manager

The Dashboard will display:

Revenue Projection by Account Manager — FY 2026–2027

The projection will be based on the **contracted order value** and the order's billing terms.

The reference prototype similarly provides account-manager revenue and current fiscal-year projection views.

30. Revenue Projection

Revenue Projection will be a key OMS capability.

Revenue projection will be based on the **contracted order value**, rather than actual collections.

The projection will take into consideration:

- Contracted order value
- Product
- First Billing Month
- Billing Cycle
- Agreement Period
- Account Manager
- Fiscal Year

The fiscal year will run from:

April to March

The system will calculate expected revenue for applicable months based on the order's contracted value and billing schedule.

The existing reference specifies full-value recognition in each applicable billing month, bounded by agreement duration where applicable.

31. Reports

The OMS Reports section will provide business and operational analysis.

The primary reports will be:

1. **Approval Report**
 2. **Billing / Revenue Projection Report**
 3. **Manager Report**
 4. **Revenue Projection Report**
-

32. Approval Report

The Approval Report will provide visibility into order approval performance.

The report will show orders that have completed the required approval process and allow users to analyze the time taken for approvals.

The report may include:

- Order Number
- Client
- Product
- Account Manager
- Order Amount
- Technical Approval
- Financial Approval
- Approval Dates
- Approval Duration
- Current Status

The reference prototype defines this as an audit view of orders that have completed activation approval and provides the number of days taken for clearance.

33. Billing / Revenue Projection Report

The Billing / Revenue Projection Report will provide order-level revenue projection.

The report will display:

- One row per order
- Revenue by month
- Fiscal-year revenue
- Total revenue
- Opened Revenue
- Applicable billing information
- Billing opening and closing date information

The report will cover the April–March fiscal year.

For billing-related visualization, the applicable billing period shall be represented based on the actual billing opening-to-closing date window rather than only the billed month.

Users should be able to filter the report by relevant fields such as:

- Client Product
- Business Unit
- Account Manager
- Amount
- Approval/Clearance Status
- Order Creation Date

The reference defines this as a rolling twelve-month fiscal-year projection with one row per order and monthly revenue columns.

34. Manager Report

The Manager Report will provide a summary of order and revenue performance by Account Manager.

The report will provide:

- Account Manager
- Order count

- Orders by status/clearance state
- Total order amount
- Revenue information

Users should be able to filter the report by relevant fields such as Product, Business Unit, Amount and Date.

Users should be able to drill down from an Account Manager to the underlying orders.

The reference prototype defines the Manager Report as one summary row per Account Manager, with order counts by clearance state and total amount, expandable into the manager's order list.

35. Revenue Projection Report

A dedicated Revenue Projection view will provide management with visibility into projected revenue based on contracted order values.

The report should allow analysis by:

- Account Manager
- Product
- Client
- Fiscal Year
- Month
- Order

The report will support analysis of projected revenue for the current financial year and future periods covered by active contracts.

36. Order Management

Order Management will be the primary operational area for the BD team.

BD will be able to:

- Create orders
- View orders
- Search orders
- Filter orders

- View order details
- Preview orders
- Amend Active orders
- Initiate cancellation
- View order history
- Track approval status
- Respond to rejection

The order listing will provide visibility across the defined lifecycle stages.

Each eligible order may provide actions such as Amend and Cancel based on the order's current status and the user's permissions.

Cancellation from Manage Orders is initiated one order at a time; multi-select/bulk cancellation is not available from this view, to reduce the risk of a large number of orders being cancelled unintentionally in a single action. This is distinct from Close Billing, where batch confirmation remains available for opening and closing billing (see Section 28).

Order Preview

Users shall be able to select an order number from applicable OMS views to open a read-only order preview.

The order preview shall present order information through a stepper-based view corresponding to the order creation stages.

The preview shall be read-only and shall not allow users to modify the order.

37. Order Search and Filtering

Order Management will provide search and filtering capabilities.

The system should allow users to filter orders using relevant fields such as:

- Client
- Product
- Account Manager
- Order Amount
- Order Creation Date
- Order Status
- Approval Status

Users will also be able to navigate by order stage:

- All Orders
- Pending
- Amendment Pending
- Active
- Agreement Over
- Cancelled

Each stage tab shall display a live count of the orders currently matching that stage. This count reflects any other filters or search terms already applied (e.g., Client, Product, Account Manager, Amount, Date) — only the stage condition itself varies between tabs, so the numbers stay consistent with what's actually shown when a tab is selected.

The order listing shall provide actions and information based on the user's role, permissions and the current order status.

38. Order History

OMS will retain the complete history of an order.

The history should allow users to understand:

- When the order was created
- Who created it
- Approval actions
- Rejections
- Changes made after rejection
- Amendments
- Cancellation initiation
- Cancellation completion
- Billing-related actions where applicable

For amended orders, the relationship between predecessor and successor must remain visible.

39. Notifications and Alerts

OMS will provide notifications to relevant users based on workflow events.

Examples include:

New Order

BD submits → Tech notified

Technical Approval

Tech approves → Finance notified

Technical Rejection

Tech rejects → BD / Client Manager notified

Financial Approval

Finance approves → Order progresses toward Active

Financial Rejection

Finance rejects → BD / Client Manager notified

Cancellation

BD initiates cancellation → relevant users notified

Cancellation completed → relevant users notified

Amendment

BD submits amendment → Tech notified

Tech approves → Finance notified

Finance approves → Successor activated and predecessor cancelled

Notifications will be designed around the user's role and pending actions.

Notifications will be designed around the user's role and pending actions.

40. Business Rules

Business Required Document(BRD)- Order Management System

The following business rules will govern OMS.

BR-01 — Order Creation

Only users with appropriate BD/order-management permissions may create an order.

BR-02 — Activation

An order cannot become Active until both Technical and Financial approval have been completed and Finance has opened its billing in Open/Close Billing.

BR-03 — Approval Sequence

Technical approval must occur before Financial approval.

BR-04 — Approval Rejection

When an order is rejected, it remains at the stage at which it was rejected until the BD/Client Manager makes the necessary changes and resubmits it.

BR-05 — Rejection Notification

The BD/Client Manager must be notified when an order is rejected.

BR-06 — Amendment

An Active order must not be edited in place. An amendment creates a new version of the order.

BR-07 — Amendment Fields

Only the following fields are amendable:

- Product
- Number of Users / Quantity
- Rate
- Payment Terms
- First Billing Month
- Agreement Period
- Advance Payment

BR-08 — Amendment Approval

When an Active order is amended, OMS shall create a new version of the order as its successor, linked to the original via a predecessor/successor relationship. The successor shall

undergo the applicable Technical and Financial approval workflow. The predecessor shall not undergo a separate Technical or Financial closure approval workflow as part of the amendment, and remains fully Active and usable until the amendment is completed.

BR-09 — Amendment Activation

Once the successor completes Technical and Financial approval, it does not become Active immediately — it moves to a "To Amend" state, awaiting completion of the amendment by Finance in Open/Close Billing. Only when Finance completes the amendment there (the "Complete Amendment" action) shall the successor become Active and the predecessor be cancelled and have its billing closed, in that same single action — the predecessor's cancellation and billing closure are not triggered by Technical/Financial approval alone, and are not separately reviewed.

BR-10 — Closure

An Active order may be cancelled through the cancellation process. Cancellation does not require a separate Technical and Financial closure approval workflow.

BR-11 — Closure Sequence

Technical approval must occur before Financial approval for an amendment. Successful completion of both approvals activates the successor and cancels the predecessor.

BR-12 — Closure Information

Cancellation requires:

- Effect From Date
- Outstanding Balance
- Cancellation Reason

Comments may be added optionally.

BR-13 — Cancellation Reasons

Cancellation reasons will be maintained as a configurable master and may be maintained product-wise.

BR-14 — Amendment Change Violation

An amendment cannot be submitted when none of the amendable fields have been changed.

BR-15 — Corporate Orders

The University duplicate-order restriction does not apply to Corporate clients.

BR-16 — Revenue Projection

Revenue projection will be based on the contracted order value and applicable billing schedule.

BR-17 — Fiscal Year

Revenue reporting and projection will use an April–March fiscal year.

BR-18 — Access Management

Admin will control which users have access to OMS and which OMS functionality they can access.

BR-19 — Separation of Duties

BD will manage order operations, while Tech and Finance will perform their respective approval functions.

BR-20 — Order Creation Sources

Orders may be created directly by BD within OMS, or generated by converting an Opportunity/Pipeline record tracked in Empower.

BR-21 — Client Master Synchronization

Edits made to client/billing details during order creation update the shared client master record in Empower and therefore apply to all orders associated with that client, not only the order being created.

BR-22 — SPOC Auto-Population

The user creating an order is automatically added as one of the order's SPOCs.

BR-23 — Amendment Pending Visibility

A successor order created through an amendment is shown under a distinct "Amendment Pending" status, separate from "Pending," until it completes both Technical and Financial approval.

BR-24 — Cancellation Initiation Scope

Cancellation of an order from Manage Orders is initiated one order at a time; bulk/batch selection for cancellation is not permitted from this view. Batch actions remain available only within Close Billing, for opening/closing billing.

BR-25 — Cancellation Closure:

A cancelled order is not marked Closed until Finance explicitly closes its billing in Open/Close Billing; this can be reversed via Reopen.

41. High-Level Workflow

41.1 New Order

BD Creates Order

42. Key Functional Requirements

ID	Requirement
OMS-FR-01	OMS shall be available as a module within Empower.
OMS-FR-02	OMS shall support role-based access.

Business Required Document(BRD)- Order Management System

OMS-FR-03	Admin shall control user access and permissions.
OMS-FR-04	BD shall be able to create orders.
OMS-FR-05	BD shall be able to amend Active orders.
OMS-FR-06	BD shall be able to initiate cancellation for eligible orders.
OMS-FR-07	Tech shall be able to approve/reject Technical approval requests.
OMS-FR-08	Finance shall be able to approve/reject Financial approval requests.
OMS-FR-09	OMS shall support the configured order cancellation process.
OMS-FR-10	OMS shall provide a dedicated Open/Close Billing module.
OMS-FR-11	Technical approval shall precede Financial approval.
OMS-FR-12	Open/Close Billing shall support To Open, To Close, To Amend and Closed billing states.
OMS-FR-13	Rejected orders shall remain at the relevant approval stage until corrected and resubmitted.
OMS-FR-14	BD/Client Manager shall receive notification when an order is rejected.

Business Required Document(BRD)- Order Management System

OMS-FR-15	Amendments shall create versioned successor orders.
OMS-FR-16	Original orders shall remain available after amendment.
OMS-FR-17	Dashboard shall display order lifecycle KPIs.
OMS-FR-18	Dashboard shall display revenue information and projection.
OMS-FR-19	Dashboard shall display notifications and approval bottlenecks.
OMS-FR-20	OMS shall provide Approval, Billing/Revenue Projection, Manager and Revenue Projection reports.
OMS-FR-21	Revenue projection shall be based on contracted order value.
OMS-FR-22	OMS shall initially support LMS and Quirio.
OMS-FR-23	OMS shall support future addition of products.
OMS-FR-24	OMS shall retain order and approval history.
OMS-FR-25	OMS shall provide a read-only stepper-based order preview accessible through order numbers.

Business Required Document(BRD)- Order Management System

OMS-FR-26	Cancellation of an order from Manage Orders shall be initiated individually, one order at a time; bulk/batch cancellation shall not be available from this view.
OMS-FR-27	OMS shall prevent an amendment from being submitted when no amendable field has been changed.
OMS-FR-28	OMS shall provide Dashboard filters for Date, Business Unit and Product.
OMS-FR-29	OMS shall provide Date filter presets including 1 Month, 3 Months, 6 Months, Last Year and Custom.
OMS-FR-30	The Billing / Revenue Projection Report shall display Opened Revenue.
OMS-FR-31	The billing report shall represent the applicable billing period based on the actual billing opening-to-closing date window.
OMS-FR-32	OMS shall support order creation via two paths: direct creation and conversion of an Opportunity/Pipeline record from Empower.
OMS-FR-33	OMS shall allow client/billing details, including Client Name, to be edited within the order creation form once a client and product have been selected.
OMS-FR-34	Client/billing detail changes made during order creation shall update the corresponding client master record in Empower.

OMS-FR-35	OMS shall automatically add the order-creating user as a SPOC on the order being created.
OMS-FR-36	OMS shall display amendment successor orders under a distinct "Amendment Pending" stage, separate from "Pending," until both Technical and Financial approvals are completed.
OMS-FR-37	OMS shall provide a Business Unit filter within the Billing/Revenue Projection Report and the Manager Report.
OMS-FR-38	Each order-stage tab in Manage Orders shall display a live count of orders currently matching that stage, reflecting any other filters or search terms applied.

43. Assumptions

1. OMS will be implemented within the existing Empower application.
2. Existing client and user information available in Empower will be reused.
3. BD is responsible for the operational management of orders.
4. The Client Manager is responsible for making corrections when an order is rejected.
5. Tech and Finance will remain separate approval functions.
6. LMS and Quirio are the initial supported products.
7. Additional products will be introduced in future.
8. Revenue projection represents expected revenue based on contracted order value and billing terms.
9. OMS will use the organization's April–March fiscal year.
10. Detailed technical validation performed by Tech is outside the scope of this BRD.
11. Detailed financial validation performed by Finance is outside the scope of this BRD.
12. Document upload is considered a standard requirement of order creation and does not require separate business elaboration in this BRD.

13. Cancellation of a predecessor resulting from an approved amendment is completed as part of the amendment approval workflow and does not require a separate Technical and Financial closure approval process.
 14. Close Billing is managed separately from order cancellation through a dedicated billing workflow.
 15. Business Unit filtering is available in the Billing/Revenue Projection Report and Manager Report; the Dashboard's Business Unit filter remains a placeholder until Dashboard-level Business Unit filtering is implemented.
 16. Opportunity/Pipeline conversion into an order is a capability of Empower; OMS receives the resulting order through the same order creation flow used for direct order creation.
 17. Because OMS reuses Empower's client master rather than a separate copy, editing client details during order creation is a shared, system-wide change, not one scoped only to the order being created.
-

44. Future Scalability

The OMS should be designed to support future expansion.

Potential future additions include:

- Additional products
- Additional order types
- Additional approval stages
- Additional business teams
- Additional reports
- Additional revenue metrics
- Additional integrations

The initial implementation will focus on LMS and Quirio while maintaining a product structure that can accommodate future products.

45. Success Criteria

The OMS will be considered successful when:

1. BD can manage the complete order lifecycle from creation to closure.
2. Technical and Financial approvals are clearly separated.
3. Orders cannot become Active without both required approvals.

4. Rejected orders remain at their relevant stage until corrected and resubmitted.
 5. BD receives appropriate notifications for rejected orders and other workflow events.
 6. Amendments preserve the original order and create a new version.
 7. The original and amended orders remain linked.
 8. Order cancellation is correctly initiated, processed and reflected in the order lifecycleManagement can see the overall order position through the Dashboard.
 9. Revenue projection can be generated using contracted order values.
 10. Approval bottlenecks and orders requiring attention can be identified.
 11. Amendments successfully activate the successor and cancel the predecessor after the required Technical and Financial approvals are completed.
 12. Open/Close Billing provides a controlled process for managing billing opening and closing activities.
 13. Billing reports provide visibility into Opened Revenue and the applicable billing opening-to-closing date window.
 14. Reports provide visibility into approval performance, revenue, revenue projection and Account Manager performance.
 15. Admin can control user access and permissions.
 16. The OMS can accommodate additional products in the future.
-

46. Glossary

Term	Meaning
OMS	Order Management System
BD	Business Development
Tech	Technical Team
Finance	Finance Team

Business Required Document(BRD)- Order Management System

Admin	Administrator / Access Management Team
Client Manager	BD user responsible for managing the client/order relationship
Approval Pending	Order waiting for required approval
Pending	Order awaiting completion of a required workflow or approval action
Active	Order that has completed the required Technical and Financial approvals
Agreement Over	Active order whose defined agreement period has elapsed
Cancelled	Order for which the cancellation process has been completed
Cancellation	Process through which an active order is cancelled
Open/Close Billing	Process for managing billing opening and closing activities
To Open	Billing item requiring billing opening action
To Close	Billing item requiring billing closing action

Business Required Document(BRD)- Order Management System

Opened Revenue	Revenue associated with billing periods that have been opened
Predecessor	Original order that is being replaced by an amendment
Successor	New version created through an amendment
FY	Financial Year
YTD	Year to Date
SPOC	Single Point of Contact
GST	Goods and Services Tax
TDS	Tax Deducted at Source
Revenue Projection	Expected revenue calculated from contracted order value and billing terms
Amendment Pending	Successor order created through an amendment that is awaiting completion of Technical and/or Financial approval
Opportunity/Pipeline	A pre-sales record tracked within Empower that can be converted into an order in OMS

To Open	New order that has cleared approval and is awaiting Finance to open its billing. To Amend
To Amend	Amendment successor that has cleared approval and is awaiting Finance to complete the amendment.

47. Conclusion

The Order Management System will establish a controlled and transparent framework for managing the company's B2B orders within Empower.

The core responsibility will be divided across the business teams:

BD manages the order.

Tech validates and approves the technical aspects.

Finance validates and approves the financial aspects.

Admin controls system access and permissions.

The core order lifecycle will be:

Create → Technical Approval → Financial Approval → Open → Active → Amend / Cancel

For amendments, the successor follows the Technical and Financial approval workflow. Once both approvals are completed, the successor becomes Active and the predecessor is cancelled as part of the same amendment process.

For cancellations, the order follows the cancellation process and is moved to Cancelled.

The OMS will additionally provide a dedicated Open/Close Billing capability for managing billing opening and closing activities, along with centralized Dashboard visibility, approval monitoring, revenue analysis, billing reporting and revenue projection based on contracted order value.

The initial implementation will support **LMS and Quirio**, while the overall design will allow additional products and capabilities to be incorporated as the company's B2B business expands.
